

# LiveNX 23.3.1

## RELEASE NOTES

### Release Information

- Release Version: LiveNX v23.3.1
- Release Date - Sep 22, 2023
- Release Designation - MD (Maintenance Deployment)

### Build Information

#### Application Version

---

Server Version: 23.3.1-20230921-719f17d

Web Version: 23.3.1-20230922-10c2c8f+b21

### Resolved Customer Issues

- LS-3505 - Fixed an issue where the historical devices were not selectable for reports on the Operations Dashboard
- LS-3455 - Fixed an issue where non-LDAP users were removed after deleting an LDAP server

### Bug Fixes

#### General

- Fixed an issue where server would take abnormally long to start after upgrading from a version earlier than 23.1.0.

#### Alerting

- Fixed an issue where IPSLA alert thresholds would reset on restart if severity were changed
- Fixed an issue where alert thresholds would be set to 0 upon saving if disabled
- Improved validation and error messages

#### Dashboard

- Fixed an issue where all default dashboards were being created for new users rather than the proper subset

#### Device Management

- Fixed an issue where seed discovery would not discover all devices associated with the seed device

#### Logical Topology

- Fixed an issue where the utilization layer would not honor site filters

#### Reports

- Fixed an issue where the historical devices were not selectable for reports on the Operations Dashboard

---

## User Management

- Fixed an issue where LDAP servers would not use the default port when none was provided
- Fixed an issue where non-LDAP users were removed after deleting an LDAP server
