Release Information

- Release Version: LiveNX v24.1.1
- Release Date - Jul 12, 2024
- Release Designation - MD (Maintenance Deployment)

Build Information

Application Version

| | |
|-----------------|----------------------------|
| Server Version: | 24.1.1-20240709-055bfd |
| Web Version: | 24.1.1-20240708-a008849+b3 |

Ubuntu Version: 20.04.6

Java Version: 17.0.7

Bug Fixes

General

- Fixed an issue where WMIC could not communicate with the latest Windows patch due to increased security requirements
- Fixed an issue where the server would not start due to InfluxDB never initializing

Device Management

- Fixed an issue where devices were showing as "not configured" despite being configured
- Fixed an issue where SNMP credentials would sometimes error out while saving

LiveAdmin

- Fixed an issue where the NTP could not be configured

Plugins

- Fixed an issue where editing a plugin would enable it

Reports

- Fixed an issue where certain filters were not working as expected for Cisco SD-WAN reports
- Fixed an issue where updating a template would reset the visibility setting for report templates
- Fixed an issue where custom reports would be temporarily visible after deleting them

Site Management

- Fixed an issue where email could not be deleted from a site

Stories

- Fixed an issue where status was not properly colored for Voice/Video traffic on the flow path analysis
- The flow path analysis path view will no longer filter on application name; providing better multi-vendor support.
