## Release Information

- Release Version: LiveNX v7.2.1
- Release Date: 11 May 2018
- Release Designation: MD (Maintenance Deployment)

## Build Information

APPLICATION VERSION	
Server Version :	7.2.1-20180510-46f80d3
Web Version :	7.2.1-20180510-4da6263+b66
OVA Version :	1.19.0

## Resolved Customer Issues

- [LD-18022](#) User specific default CLI credentials are lost after server reboot.
- [LD-17999](#) When polling a device, SNMP GETBULK non repeaters value shouldn't be greater than SNMP GETBULK variable bindings value.
- [LD-17953](#) WAN dashboards missing "wan" filter.
- [LD-17896](#) Unable to set/save a time zone for a site in the site configuration dialogue.
- [LD-17822](#) LiveNX reported server error and node disconnected.
- [LD-17780](#) The export logs and configuration features load entire file contents into memory.
- [LD-17720](#) Flow refresh timeout.
- [LD-16916](#) Can't copy ACLs with time range.
- [LD-16508](#) LiveNX crashes when trying to save the report as PDF - unhandled error.
- [LD-16273](#) Support for Checkpoint firewall context based virtual interfaces.
- [LD-16175](#) REST API support for a device with serial containing characters "{" and "}" .
- [LD-18028](#) Allow customers from China to access our cloud keys and other sites and block Libya.
- [LD-17969](#) Unable to make changes to QoS settings.
- [LD-18029](#) BFD data from one vEdge delayed for more than one hour could cause no data on the SD-WAN dashboard.
- [LD-17692](#) Records not processed in time order when there are large number of BFD records polled.
